EDUCATION

University of Arizona

Jan 2026 — Exp. Dec 2027

MS in Computer Science GPA: 4.0

BS in Computer Engineering, Minors in Computer Science, Mathematics

Aug 2016 — May 2020

SKILLS

- **Programming Languages:** Java, JavaScript, TypeScript, Python, HTML/CSS, C#, SQL
- **Technologies:** Spring, Angular, PostgreSQL, Selenium, Maven, Jackson, Git, Node

WORK EXPERIENCE

Digital IT Intern

Jun 2026 — Present

W.L. Gore & Associates

Phoenix, AZ

- Built an end-to-end demand forecasting solution using Python and Azure ML, evaluating machine learning, planner, and statistical forecasts across 395 product-region series.
- Collaborated with Demand Planners, IT, and Supply Chain stakeholders to develop and benchmark forecasting solutions, aligning model outputs with operational planning needs and enterprise forecasting processes.
- Improved forecast accuracy over statistical benchmarks by up to 3.5 percentage points while delivering the top-performing forecasts for the United States and China and achieving planner-level accuracy within 0.05 points.
- Created interactive Power BI dashboards and data pipelines that consolidated model, planner, and actual sales data into scalable performance reporting used to evaluate forecast accuracy across regions and disease states.

Freelance Contributor

Jan 2024 — May 2026

DataAnnotationTech

Remote

- Delivered data annotation services for AI model training, specializing in data visualization and domain-guided labeling to improve model accuracy
- Collaborated on prompt engineering and quality-assurance workflows, validating correctness and performance of technical code outputs
- Applied RLHF (Reinforcement Learning from Human Feedback) techniques to refine model behavior and improve efficiency in complex tasks

Software Engineer

Jul 2020 — Oct 2022

PROS Holdings Inc.

Houston, TX

- Developed Spring-based Agreements API workflows in Java to meet customer requirements, enhance performance, and extend product functionality
- Increased automated CRM workflow testing coverage by 40% using Selenium, reducing manual QA load
- Implemented API load-testing tools using Gatling, enabling workflow response-time measurement and visualization
- Utilized GoCD to manage daily regression suites, resolved failures to reduce false positives, and created JIRA tickets for regressions

PROJECTS

Project Management Dashboard, Full stack productivity web app

- Built a full-stack project management platform that managed users, announcements, teams and project tracking in one system
- Bolstered security by developing authentication flows and enforcing admin-level authorization on high-risk operations
- Integrated Angular services with a Spring Boot REST API, adding error handling, loading states, and optimistic UI updates for a smoother UX
